FOR BIRTH RECORDS, 1999

This instruction manual was prepared by the Division of Vital Statistics. Questions regarding this manual and other related Vital Statistics Cooperative Program activities should be directed to the Data Acquisition and Evaluation Branch, Division of Vital Statistics, National Center for Health Statistics, P.O. Box 12214, Research Triangle Park, North Carolina 27709. Questions concerning analysis of natality data should be referred to the Reproductive Statistics Branch, Division of Vital Statistics, National Center for Health Statistics, 6525 Belcrest Road, Presidential Building, Room 840, Hyattsville, Maryland 20782.

CLASSIFICATION AND CODING INSTRUCTIONS

FOR BIRTH RECORDS, 1999

Section I - Introduction

This manual documents specifications for coding and key entry of statistical items that will be tabulated from the birth certificate by the National Center for Health Statistics (NCHS). Primarily, these specifications are used by 54 registration areas of the United States (50 states, District of Columbia, New York City, Puerto Rico and The Virgin Islands) that submit data to NCHS in electronic form through the Vital Statistics Cooperative Program (VSCP). Under the terms of the VSCP contracts with NCHS, the registration area must incorporate NCHS specifications into their own procedures so that the resultant data files meet the needs of both NCHS and the registration area. Changes for **1999** are in bold print.

Section II - General Procedures for Electronic Files

A. Receipts

All registration areas provide coded data to NCHS in electronic form (tapes, diskettes and PC to PC). These files include all of the live birth events registered within their jurisdiction for each calendar year. In general, data are transmitted on a monthly basis (but twice monthly is preferred). Transmittals take place at regular intervals and contain any and all records received and initially processed in the state office since the last transmittal to NCHS regardless of the month of the occurrence of the event. A record need not be "perfect" to qualify for transmittal. Each regular data transmittal shall contain all replacement records processed to date incorporating updated information from any source. For purposes of full utilization and release of the data, states are expected to transmit the majority of records within six months of occurrence and a complete and final version of all records by July 31.

B. Processing

As the files are received at NCHS-RTP, they are automatically checked for completeness, individual item code validity, and unacceptable inconsistencies between data items. The registration area is notified of any problems. In addition, NCHS staff review the files on an ongoing basis to detect problems in overall quality such as inadequate reporting for certain items, failure to follow NCHS coding rules, and systems and software errors. Traditionally, quality assurance procedures have been limited to review and analysis of differences between the NCHS and registration area code assignments for a small sample of records. In recent years, this procedure has been augmented by analyses of year to year and area to area variations in the data. These analyses are based on preliminary tabulations of the data that are cumulated on a year to date basis each month. All differences that are judged to have consequences for quality and completeness are investigated by NCHS. In the review process, statistical tests are used to call initial attention to differences for possible follow-up. As necessary, registration areas are informed of differences encountered in the tables and asked to verify the counts or to determine the nature of the differences. Missing records (except those permanently voided) and other problems detected by NCHS should be resolved and corrections transmitted to NCHS in the same manner as for those corrections identified by the registration area.

Section III -File Layout and Coding Instructions

This section provides the code structure, coding instructions, and output file locations for each item in the national data set.

Changes were made to the following items in 1999 to expand all year fields to four digits:

Date of Birth

Mother's Date of Birth

Father's Date of Birth

Date Last Normal Menses Began

Note: The old locations for these years have been converted to "Filler" and should be blank.
